Advanced MVC: Building Web Applications Using the ASP.NET Web API with C#

Duration: 35 hours

Prerequisites: Prior experience building ASP.NET MVC web sites and programming with C#.

Course Description: This course provides students with the skills needed to create sophisticated web applications using advanced features of ASP.NET MVC, the Entity Framework, Web API, and the popular JavaScript libraries jQuery, jQuery UI, and Bootstrap. Students will build several ASP.NET MVC web applications using Visual Studio to reinforce the skills they learn.

The course begins with an overview of ASP.NET MVC for experienced programmers and then covers the fundamentals of responsive website design. Students then learn how to use Bootstrap with MVC to make a web site responsive on devices from large desktop displays to small mobile devices.

Students will learn how to integrate jQuery into an MVC application to provide dynamic client-side behavior. They will then learn how to use jQuery's Ajax features to build more interactive MVC applications. Students will also learn how to use jQuery UI widgets to provide a more sophisticated user interface for their MVC views.

The course covers use of the Entity Framework to provide a data access layer for an MVC application. The Database First strategy is briefly examined before thorough coverage of the more configurable Code First strategy. Students will also learn how to use the Web API to build APIs that expose services and data via HTTP. These APIs can be used by a diverse set of clients including browsers, desktop applications and mobile devices.

Students Will Learn

- Generating Custom HTML Using Html Helpers and Partial Views
- Responsive MVC Applications Using Bootstrap
- Using jQuery with MVC
- Using jQuery UI Widgets with MVC
- Using Ajax to Build Interactive MVC Applications
- MVC and Routing
- Entity Framework Database First
- Entity Framework Code First Design
- Working with ASP.NET Web API
- Building Single Page Applications with ASP.NET MVC, Web API and AngularJS
- Working with NuGet

Overview

Quick Review of ASP.NET MVC

- What is the MVC Design Pattern?
- Structure of an ASP.NET MVC Web Application
- Creating an ASP.NET MVC Application Using Visual

Creating Views Using HTML Helpers

- What are HTML Helpers?
- Understanding the Built-in HTML Helpers
- Working with Inline Helpers

Studio
- Building Controllers to Handle HTTP Requests
- Designing Views Using Razor
- Using Layouts
- Coding Models
- Understanding Default Routing

Responsive Applications Using Bootstrap

- What is a Responsive Application?
- What is Bootstrap?
- Normalization Across Browsers
- Working with Accordion
- Mobile First Design
- Understanding `Bootstrap.css` and `Bootstrap.js`
- Including Bootstrap in a Layout and/or View
- Understanding Bootstrap Typography
- Understanding Bootstrap's Grid System
- Principles for Designing a View
- Working with Forms and Bootstrap

Using Ajax to Build Interactive MVC Applications

- What is Ajax?
- Working with Partial Views
- Making Asynchronous Calls Using jQuery
- Working with JSON Data

MVC and Routing

- Default Routing
- Custom Routes
- Why Use Custom Routes?
- Understanding `RouteConfig`
- Registering Convention-Based Routes
- Adding Constraints with Convention-Based Routes
- Using Attribute Routing
- Adding Constraints with Attribute Routing

- Working with Custom Helpers

Using jQuery with MVC

- What is jQuery?
- Adding jQuery to an MVC Layout and/or Page
- Understanding jQuery Selectors
- Using jQuery to Modify the DOM
- Using jQuery to POST a Form

Using jQuery UI Widgets with MVC

- What is jQuery UI?
- Including jQuery UI in an MVC Layout or View
- jQuery UI Widgets
    - Working with Tabs
    - Working with DatePicker
    - Working with Accordian
    - Working with Menu
    - Working with AutoComplete
    - Working with Dialog
    - Working with Tooltips
- Using jQuery UI Themes

Working with the Entity Framework

- What is the Entity Framework?
- Entity Framework Strategies
- Using Database First
    - Generating the Context and Entity Classes
    - Writing Basic Queries
    - Performing Joins
    - Interacting with Stored Procedures
    - Making Database Updates
- Code First
    - Designing the Data Context
    - Building the Entities
    - Configuring Relationships
    - Seeding Tables
    - Writing Basic Queries
    - Performing Joins

    - Interacting with Stored Procedures
    - Making Database Updates

Creating the Service Layer Using Web API

- What is Web API?
- Exposing Services and Data
- Types of Clients that Can Work with Web API
- Creating a Web API Service
- Working with Web API Controllers
- Understanding Web API Action Results
- Working with Data
- Filtering Requests
- Routing and Web API
- Creating Web API Help Pages
- Creating REST Services with Web API
- Configuring Web API
- Securing a Web API
- Using a Web API with MVC

Working with NuGet

- What is NuGet?
- What Types of Packages are Available?
- Installing NuGet Packages
- Popular NuGet Packages
    - .NET JSON Libraries
    - Logging
    - JavaScript Libraries

Building Single Page Applications with ASP.NET MVC, Web API and AngularJS

- What is the Architecture of a Single-Page Application?
- What is AngularJS?
- Understanding the AngularJS Architecture
- Including AngularJS within the Page
- Building AngularJS Controllers
- Creating an AngularJS Template to Define a View
- Using CSS3 Properties to Perform Animation Effects
